Art Unit: 2856

1. The following is an examiner's statement of reasons for allowance: The prior art fails to teach and or fairly suggest a dual tuning fork vibratory gyro-sensor comprising two arms having drive electrodes formed on surfaces thereof, first and second tuning-fork support sections supporting ends of the arms, first and second detection sections connected to the support sections and secured to first and second support securing sections located outside the arms section, and first and second sense electrodes formed on the detection sections, wherein a Coriolis force acting on the arms causes in-plane asymmetrical flexural secondary mode vibrations to be generated at the arms, the vibrations being transferred to the first and second detection sections by way of the first and second tuning-fork support sections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Claims 1-3 are allowed.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bernstein et al. discloses a dual tuning fork vibratory gyro-sensor in Fig. 8a comprising two arms 218 and 220 having drive electrodes 236 and 238 formed on surfaces thereof, first and second tuning-fork support sections 222 and 224 supporting ends of the arms, first and second detection sections 226a,b and 228a,b connected to the support sections and
